

Data Driven Innovation

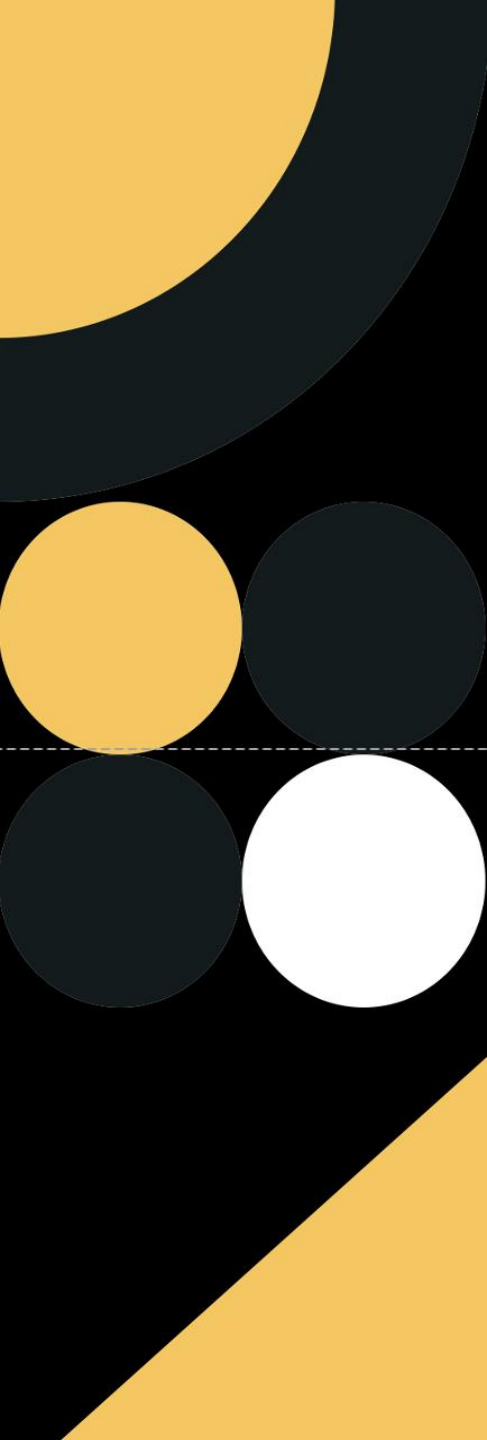

Data Driven Innovation

Agenda – Session 1

- **Historical Perspective and Importance of Data**
- **Importance and Sources of Data**
- **Nature Inspired Computing**
- **Data and AI-ML**
- **Design Thinking Aspects in Data Driven Innovation**
- **Data Driven Smart Applications**

Historical Perspective and Importance of Data

**There were days when Data was
viewed just as an output written
by Database applications.**

**Stored in disks and archived
onto dragon sized Robotic Tape
libraries**

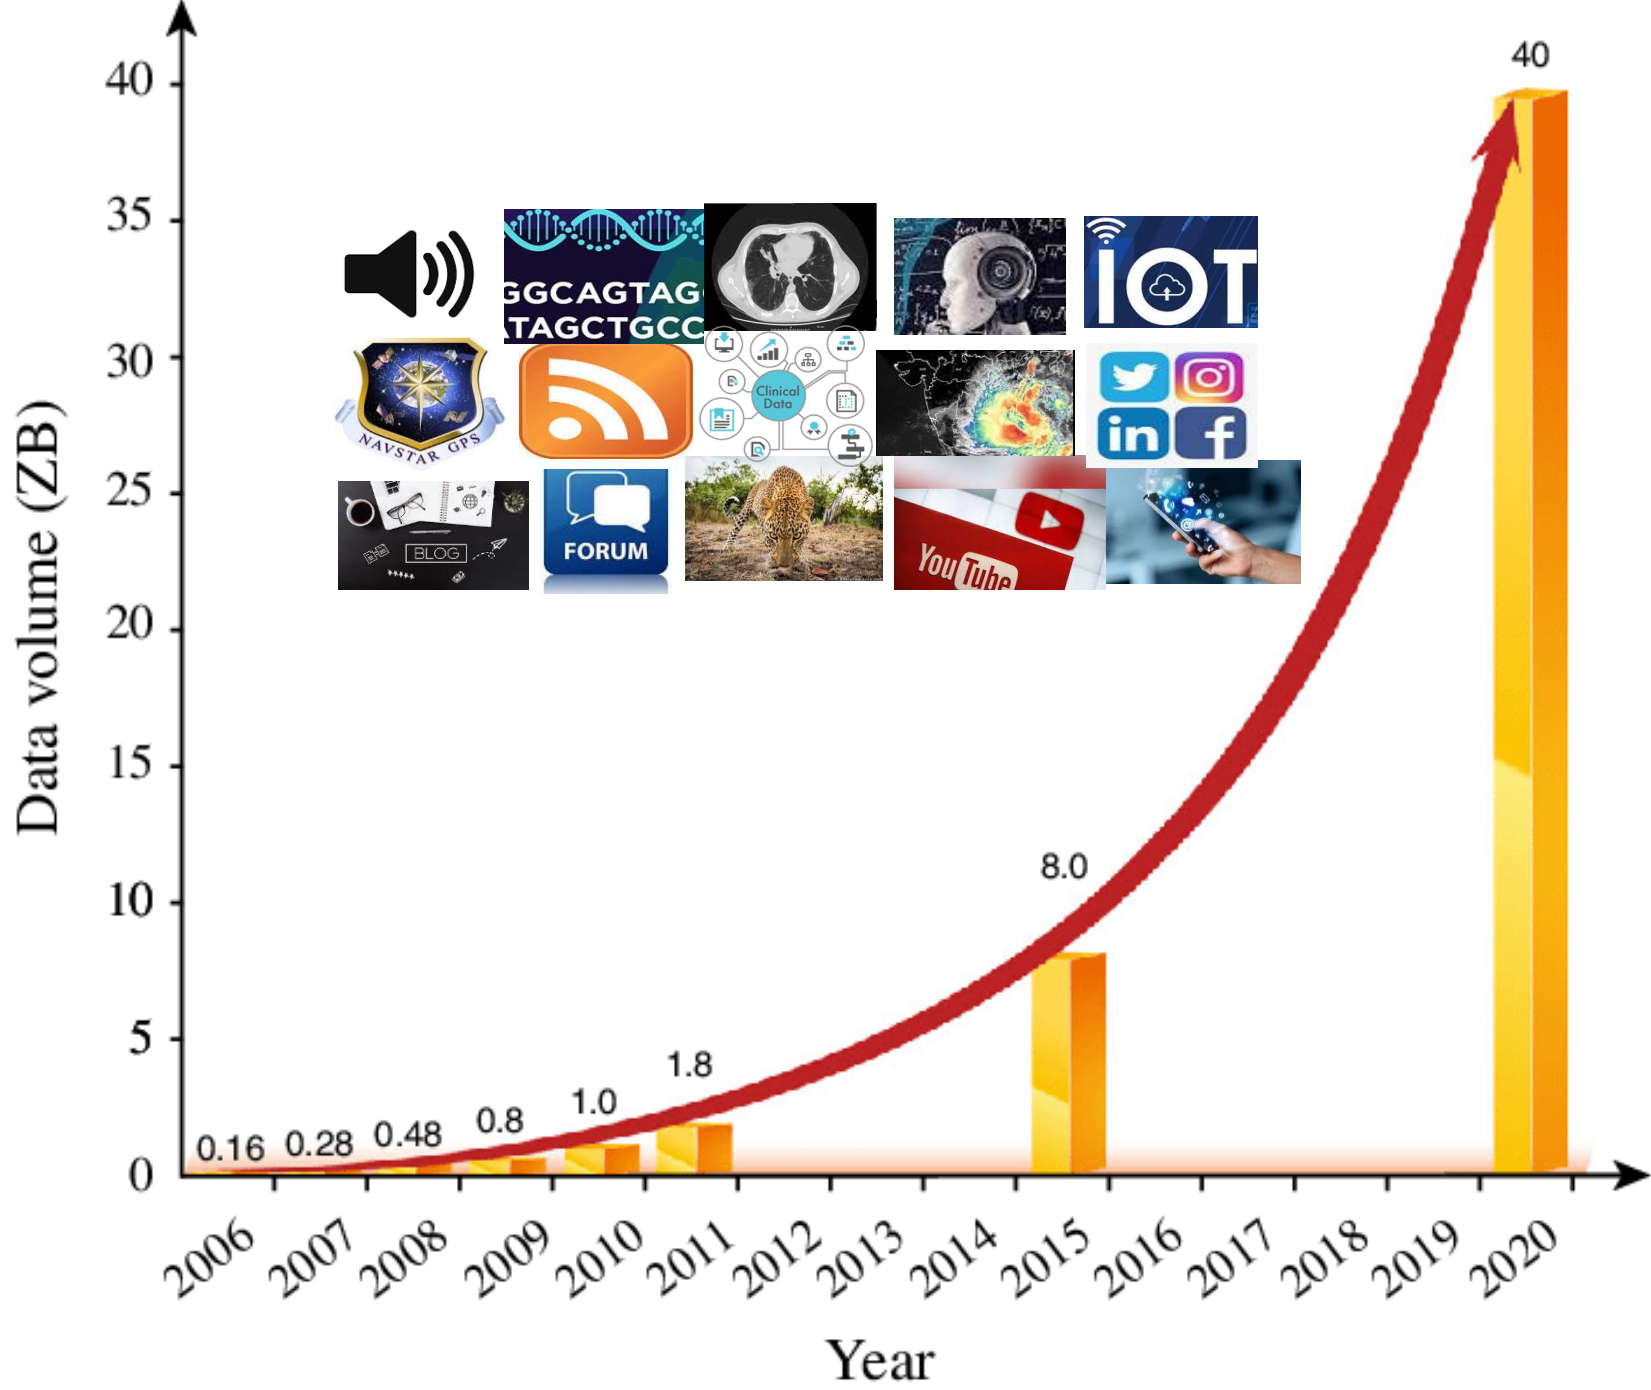

**Data is still stored in Disk and
archived onto Tapes**

But ...

**Data is no longer just a secondary
product**

Growth of Unstructured Data

**Killer Applications are now designed
around data
to
Make Decisions**

Image Classification Object Detection

We are from Egypt. My son Omar is 11 years old, suffering from a life threatening condition with recurrent heart failure. We visited hospitals in US & Europe. So We approached MGM Healthcare Center.

"We thoroughly evaluated the child before planning for the LVAD. Decided heart pump implant after ... if it was feasible." - Dr KR Balakrishnan. **Small chest cavity. What if it becomes impossible to close chest after implant ?**

Let me ask Prof. Krishna Kumar, Dept. of Engineering design, IIT Madras - Could a Virtual Reality(VR) model be built from the CT scan of the child to ensure that the implant is indeed possible ?

Since the pump could be implanted virtually using VR. This makes sure that the procedure is possible.

The implant procedure is done, **Operation is a success!**

Nature Inspired Computing (NIC)

What is NIC ?

- **Nature Inspired Computing**, or NIC, a new area of computing science - strives to develop new computing techniques - by observing how naturally occurring phenomena behave - to solve complex problems in various environmental situations
- NIC has produced groundbreaking research that has created new branches, like neural networks, swarm intelligence, evolutionary computation and artificial immune systems

Ant Colony

AI - ML - DL

Artificial
Intelligence (AI)

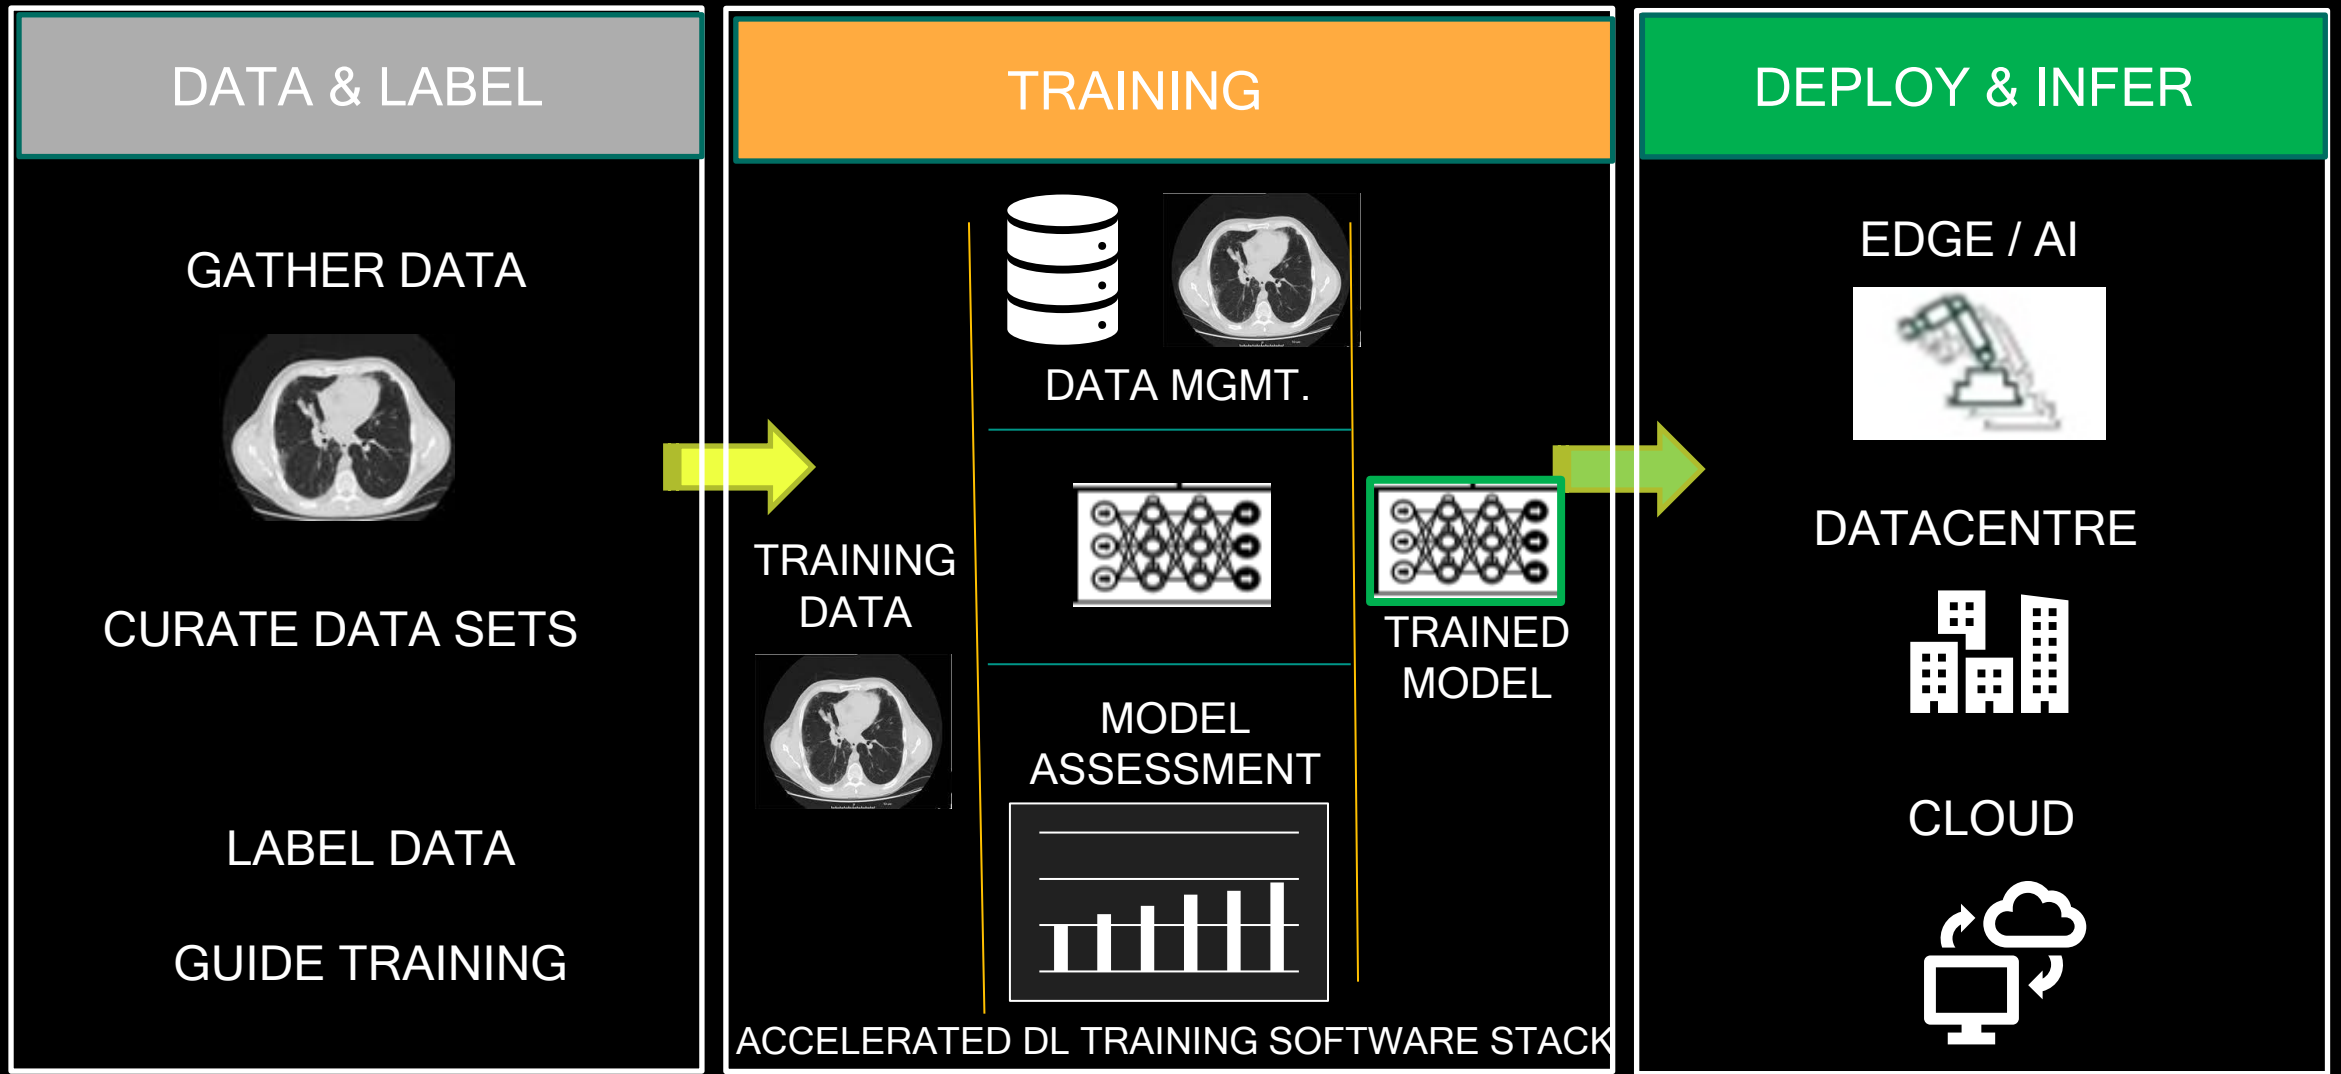

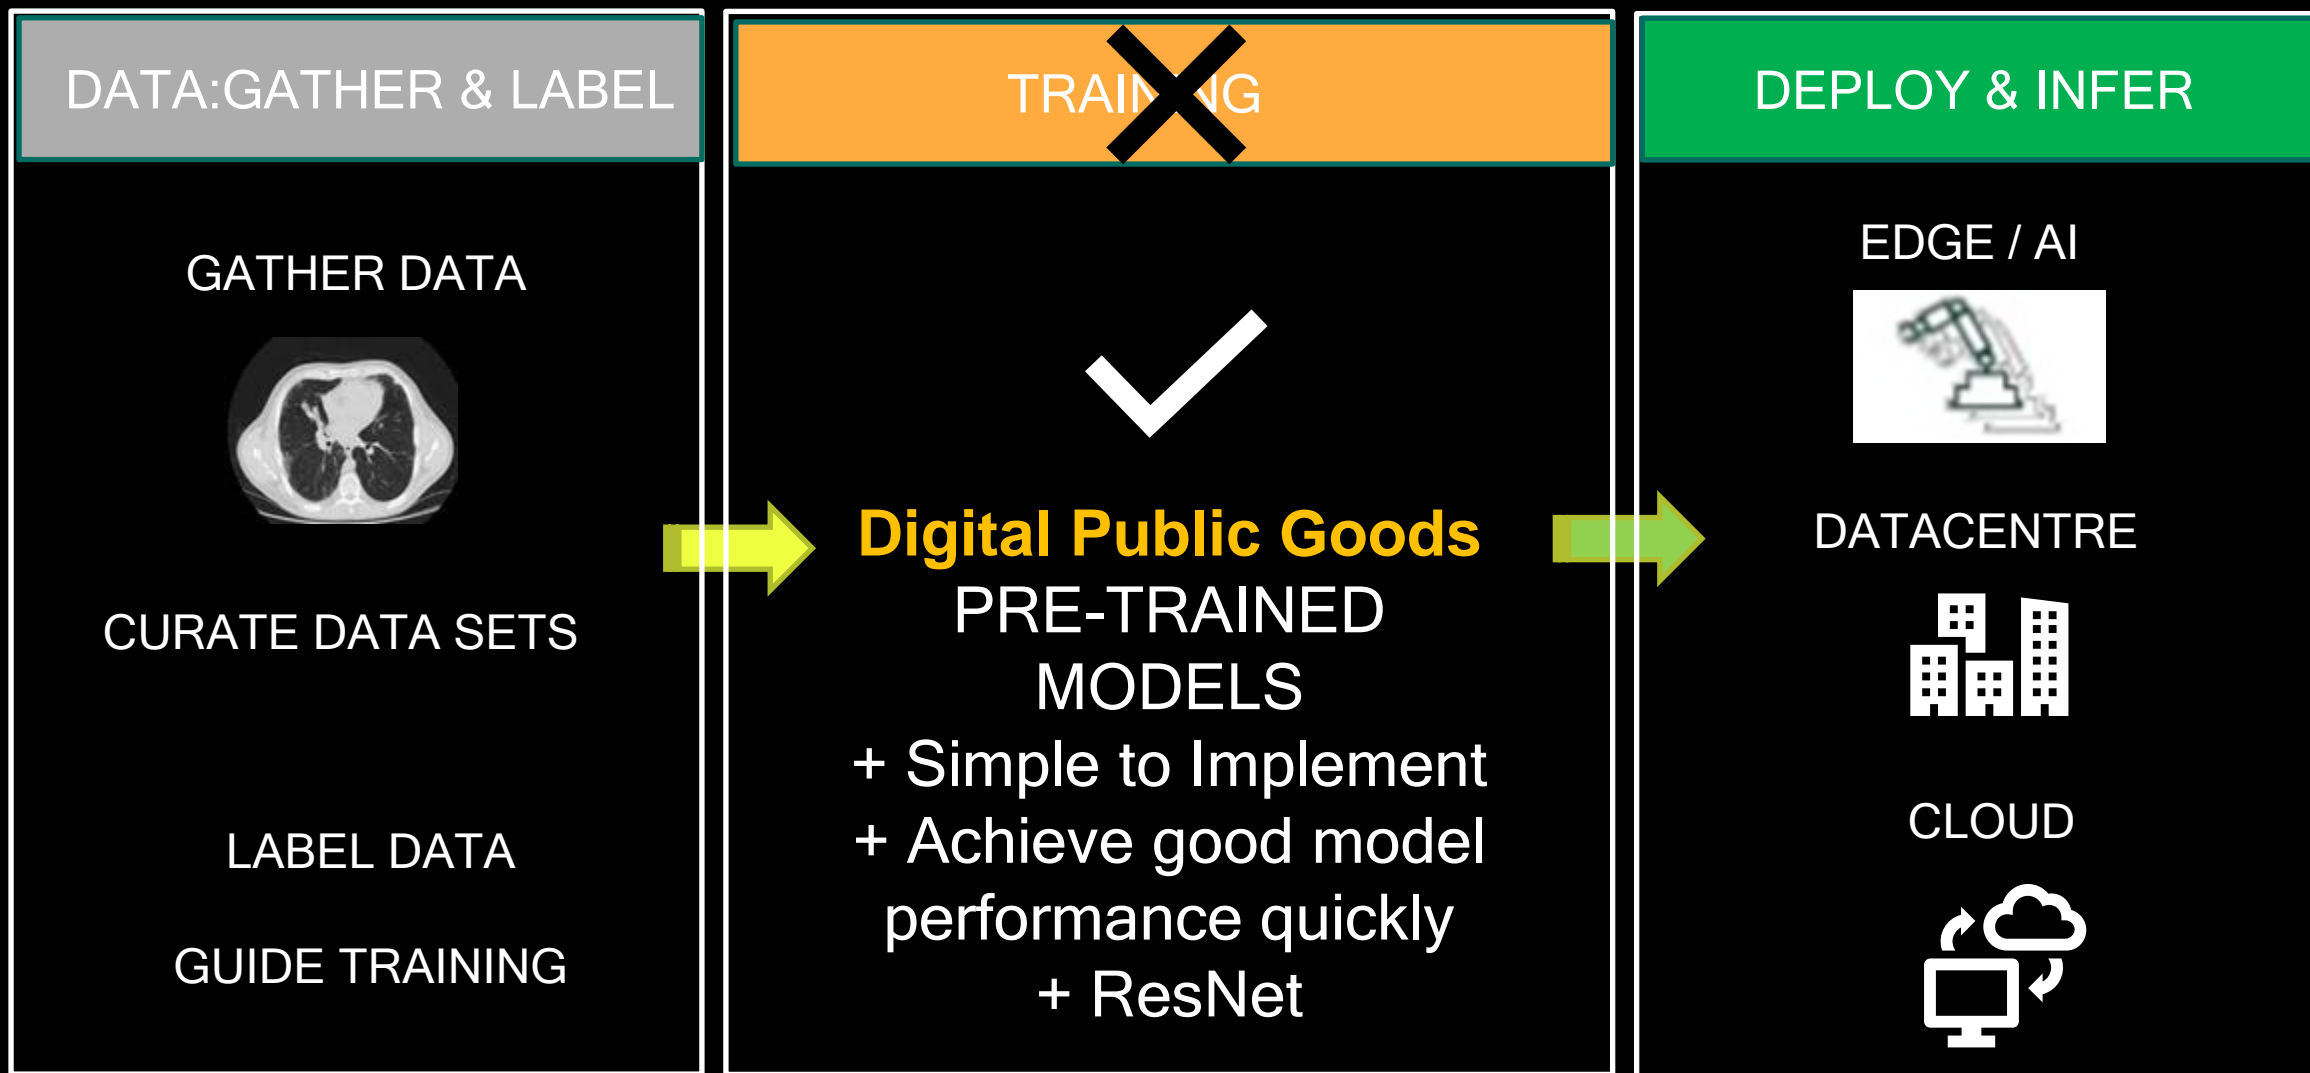

Machine Learning (ML)

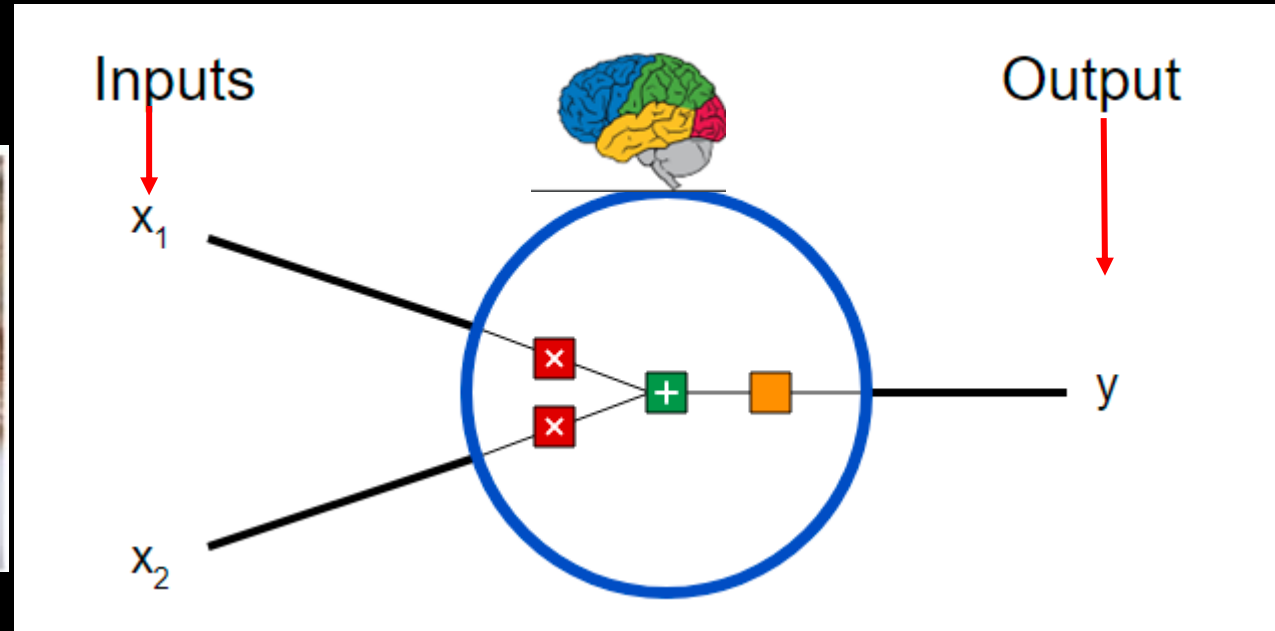

Deep Learning (DL)

Combine Neurons into **Neural Network(NN)**

CAT

Input, processing and output together is also known as

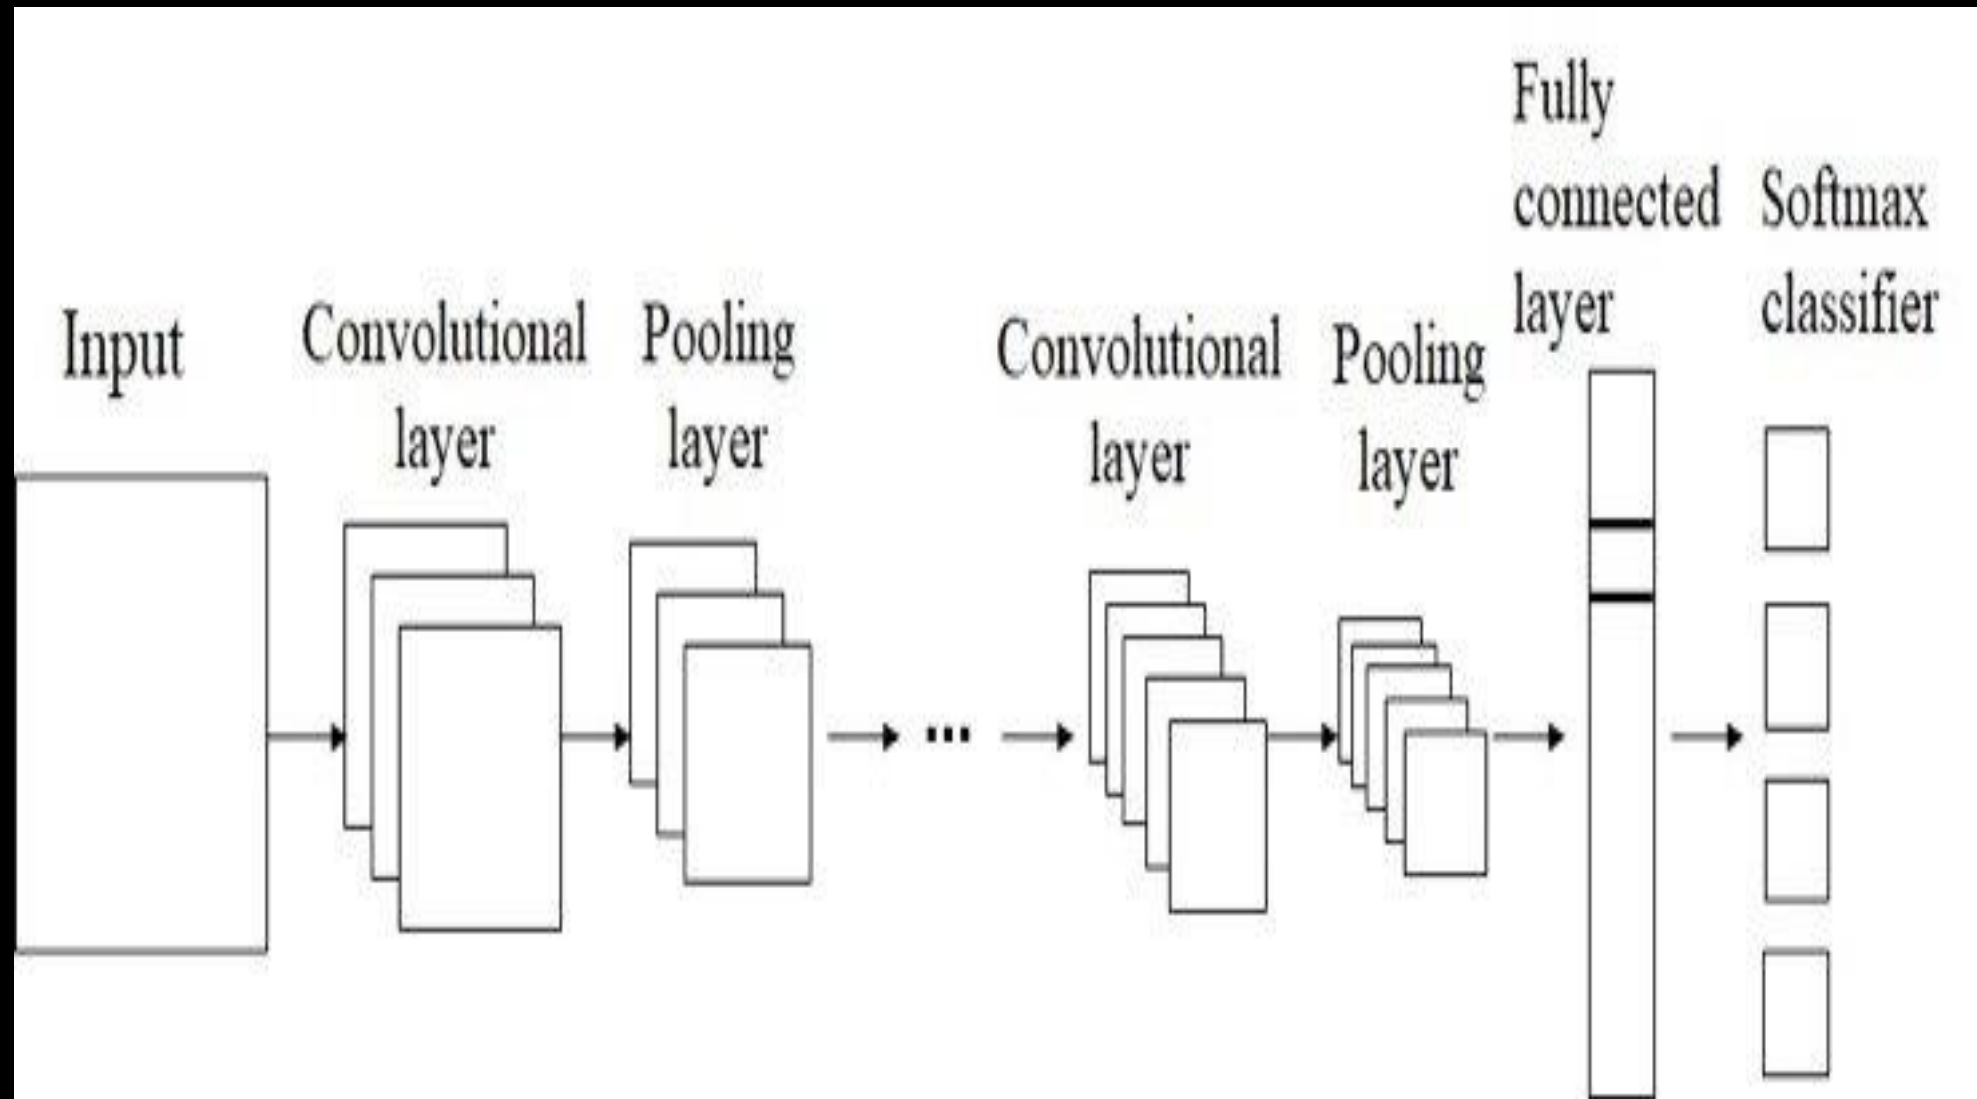

Perceptron

Combining Neurons into **Neural Network(NN)**

This network has 2 inputs, a hidden layer with 2 neurons (h_1 and h_2), and an output layer with 1 neuron (o_1). Notice that the inputs for o_1 are the outputs from h_1 and h_2 - that's what makes this a network.

Convolutional Neural Network (CNN)

IS THIS A
CAT or **DOG**?

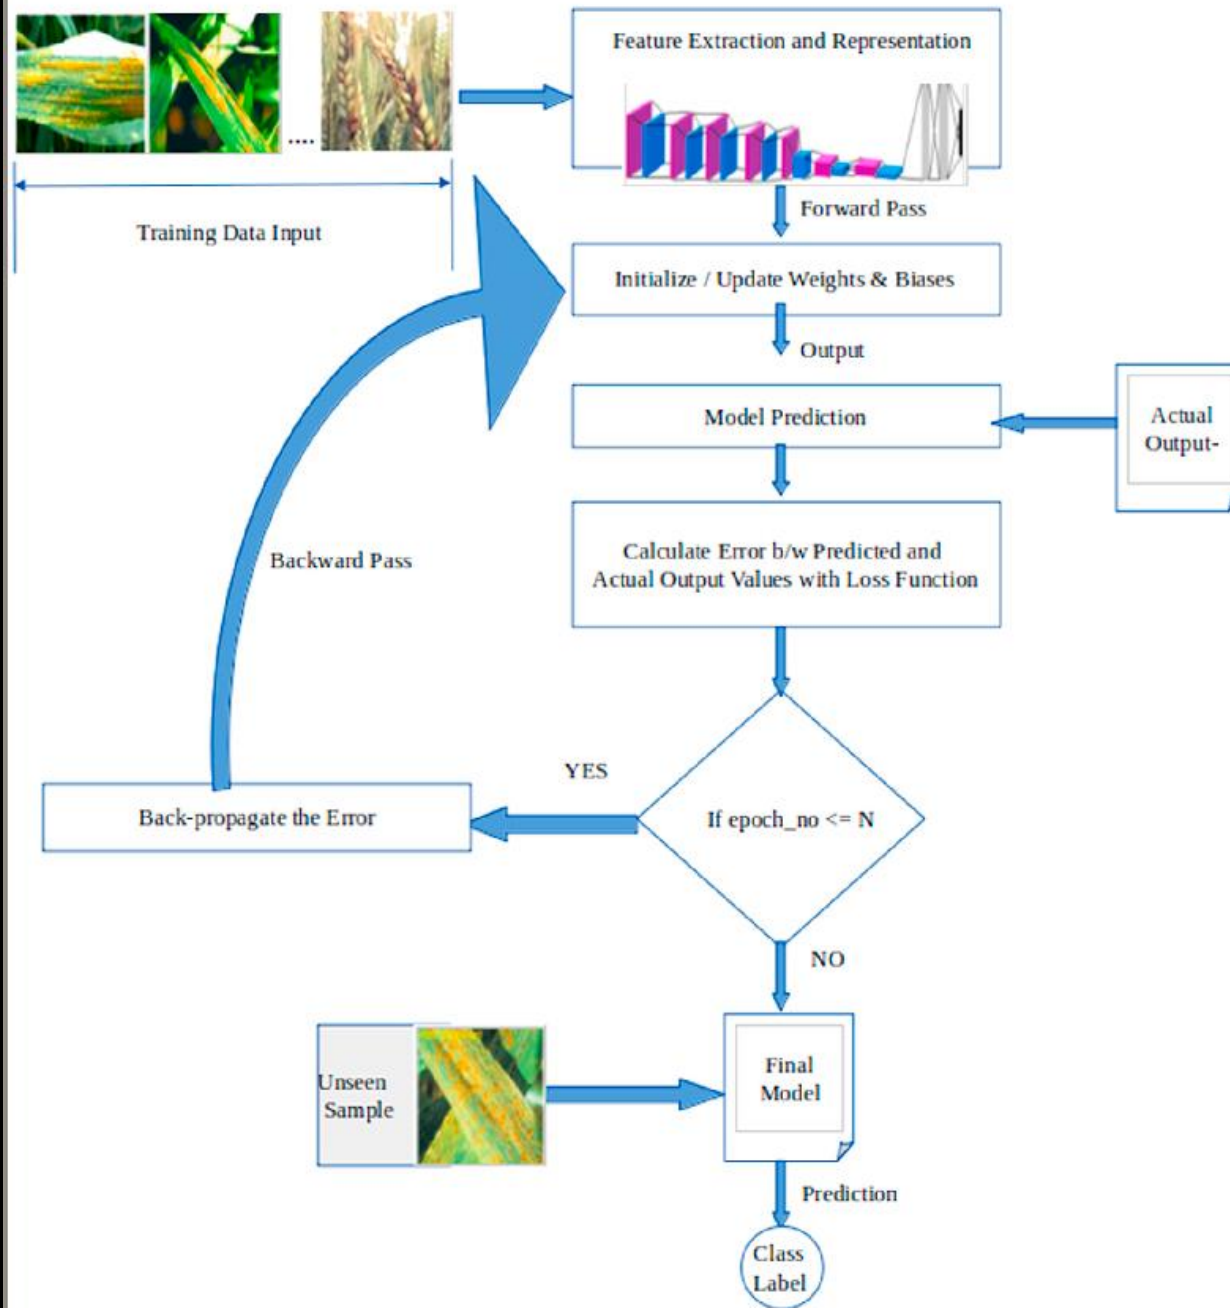

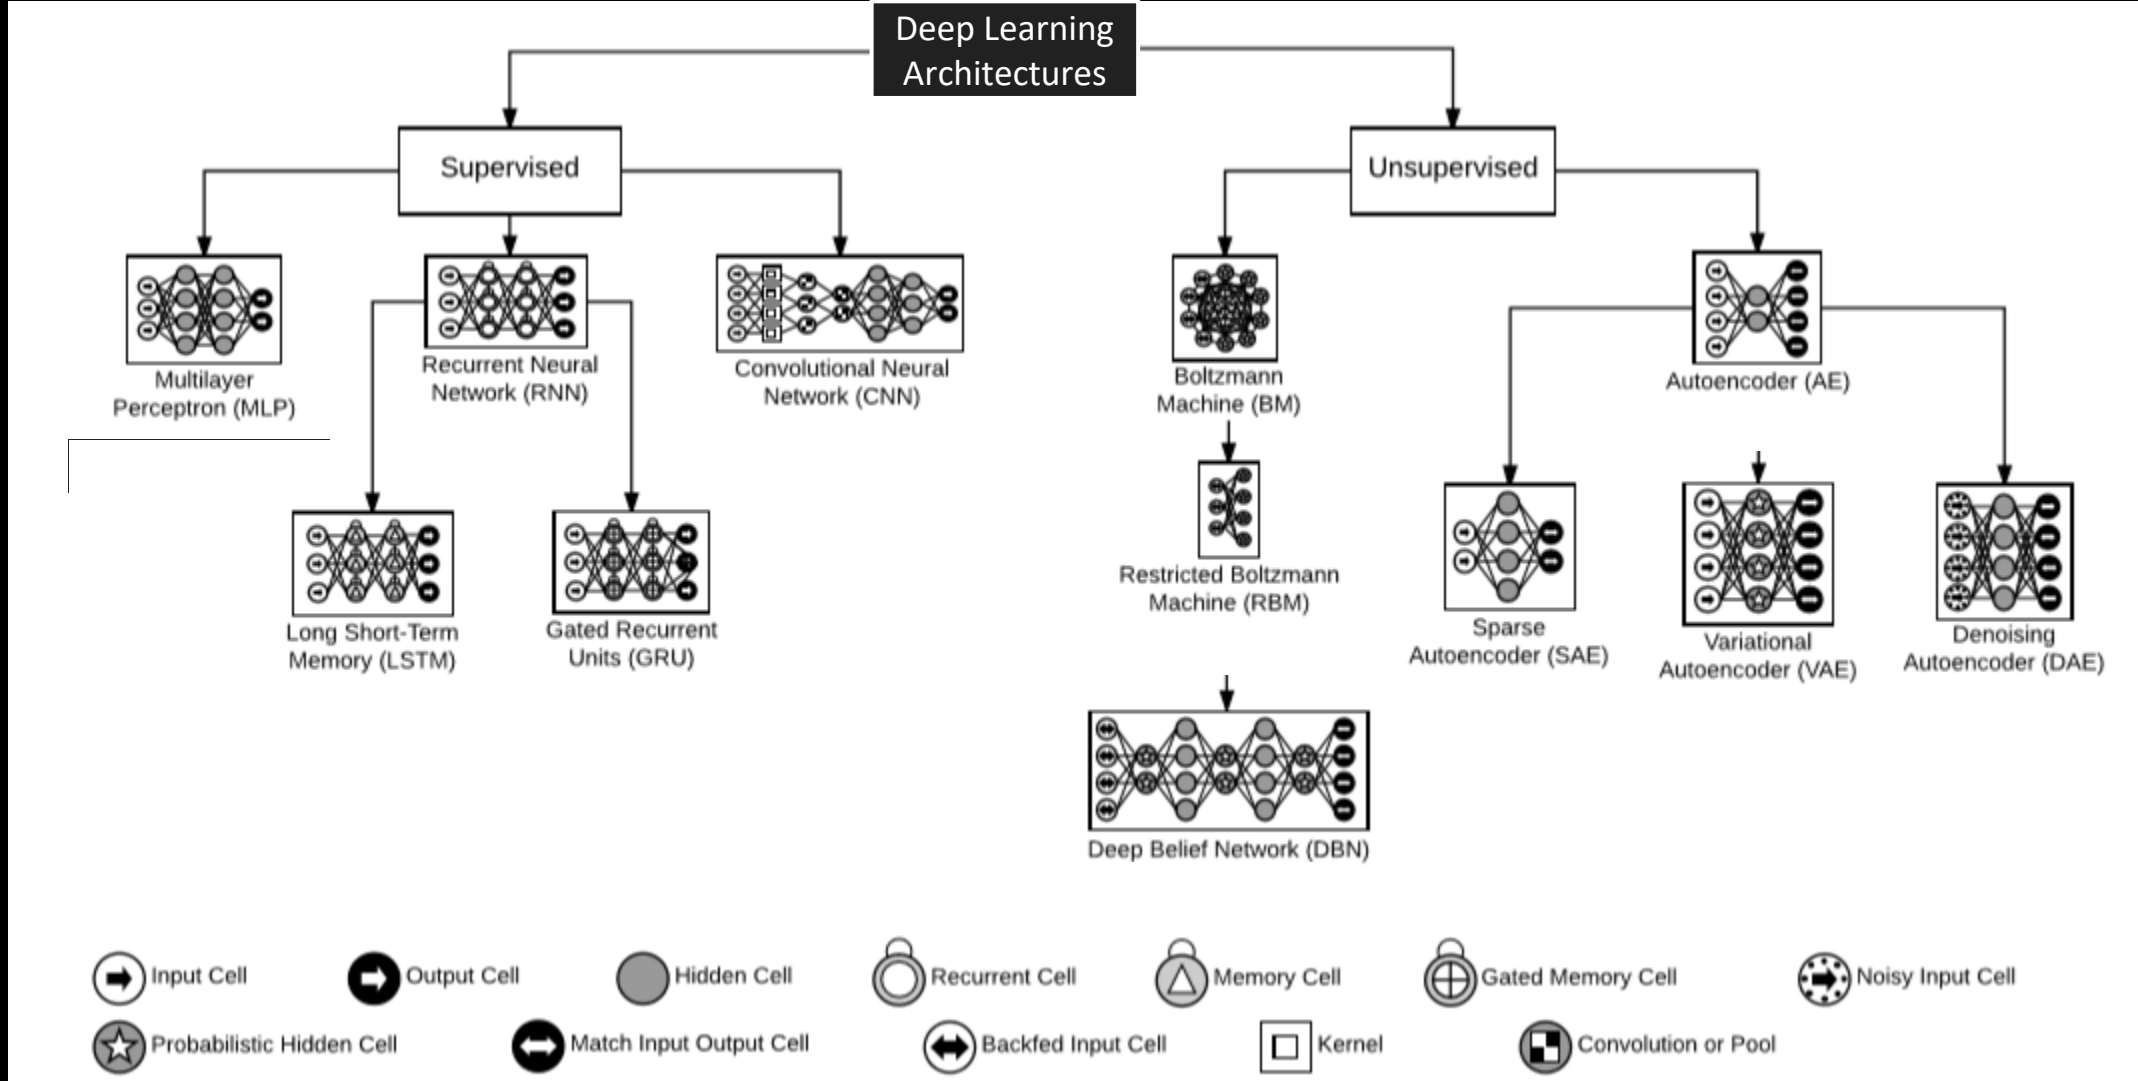

CAT DOG

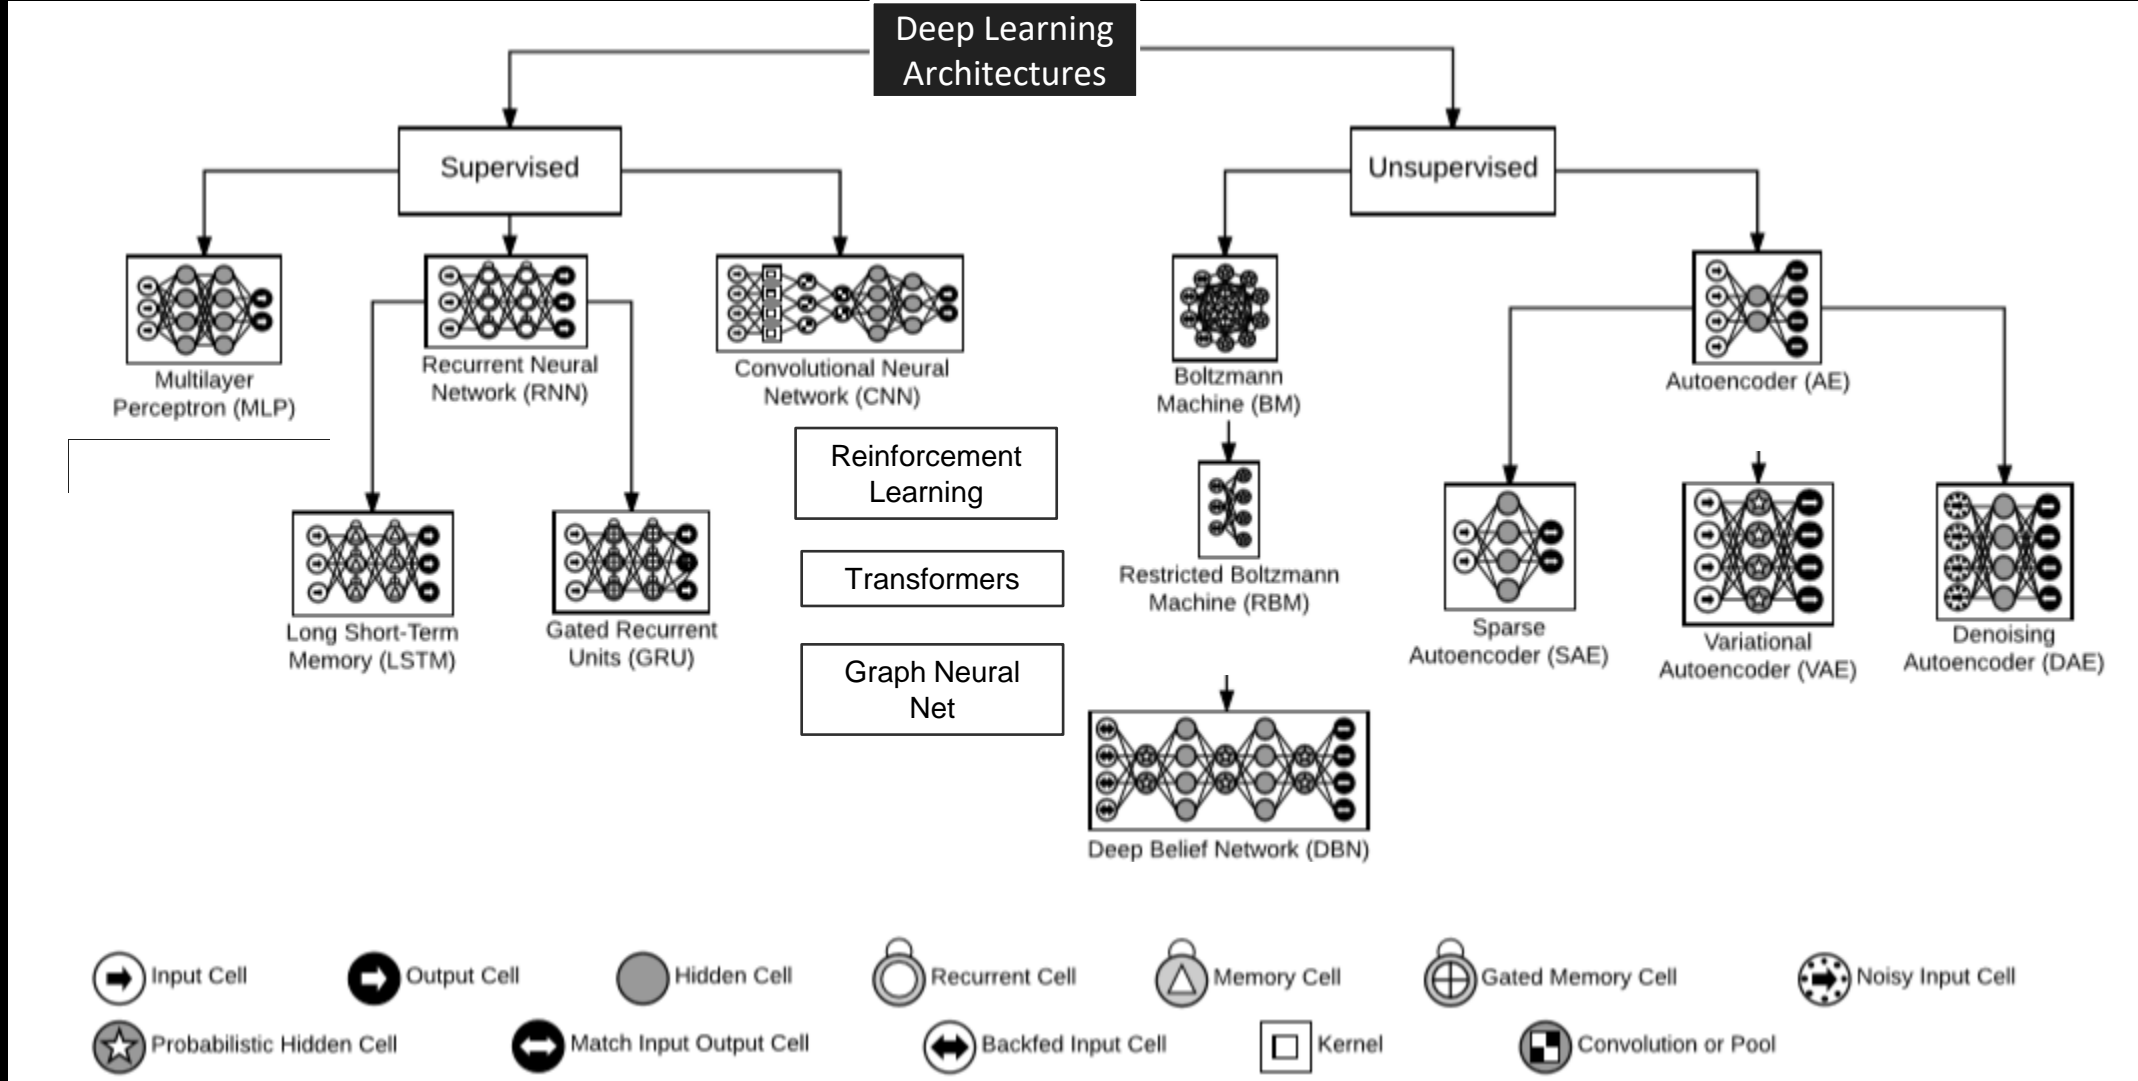

CNN based Wheat Disease Classification

While it is a fact that great progress in research has been achieved in the development of powerful AI algorithms...

An abstract graphic design on a black background. In the top-left corner, there is a large yellow circle partially cut off by the edge, with a dark blue arc below it. Below this, there are four smaller circles arranged in a 2x2 grid: top-left is yellow, top-right is dark blue, bottom-left is dark blue, and bottom-right is white. A thin white horizontal line passes through the center of the four circles. In the bottom-left corner, there is a yellow triangle pointing towards the top-right.

...the need of the hour is ...

Shifting the focus of AI practitioners from model /
algorithms to the
quality of data they use to train the models

More Data more performance

Next Natural Resource ?

Why deep learning

How do data science techniques scale with amount of data?

Data available as **Digital Public Goods**

- IoT sensors collect raw data
- Open Source Data Repositories
- ImageNet
- CIFAR
- MNIST
- COCO dataset

1 trillion IoT devices by 2035

COCO (Common Objects in Context) is a large-scale object detection dataset.

- Object segmentation
- Recognition in context
- 330K images (>200K labeled)
- 1.5 million object instances
- 80 object categories
- 5 captions per image

“A data-centric approach, allows people in manufacturing, hospitals, farms, to customize the data, making it more feasible for someone without technical training in AI to feed it into an open-source model”

- Prof. Andrew Ng

**Design Thinking elements
in
Data Driven Innovation**

Like Design Thinking,

Data Driven Innovation

follows the process of
problem discovery, research, ideation, prototyping and
usability testing

with strong emphasis on

**Creating Human Centred Solutions to Real World
Problems**

The case in point is ...

Seeing is Believing

Data Privacy and Human Rights

- **Respect for Privacy and protection of Personal Information**
- **Human Rights and Data Privacy**
- **Transparent and open discussion on Data privacy & Human Rights**

Data Driven Smart Solutions

AI based Pest Management System for Cotton Farming

Good yield of certain crops depend on identification and manual counting of pests and controlling them.

These projects are challenging when it comes to identifying pests accurately and offering guidance to the farmers

- By constantly monitoring for pests, it may be possible to detect an infestation before it occurs.
- Early detection of pests using traps can also lessen damage to plants.

- A lure based on pheromone, attracts the male moths of the pink bollworm.
- When set up in cotton fields, prone for bollworm infestation, **the trap** competes with the female bollworm moths for the male's attention, disrupting mating and curbing population growth of the pest.
- The male moth lured by the pheromone gets trapped.

Can AI assist farmers in accurately counting pink bollworm moths ?

Cotton Farmer takes photo of Trap containing moths with a phone camera

Photo containing trapped moths

Inference

Bounding Box put by AI Object Detection SSD model based on CNN algorithm

- AI Algorithm - CNN
- Data - custom annotated
- Object Detection Model - SSD

- **The object detection model puts bounding box and also counts the pink bollworm moths**

Using this pest-count and with the help of entomologists, the system guides the farmer on volume, type and timing of pesticide. This advisory is provided in local language

Spray only when both insects
and plant-damage are at the
threshold levels.

This solution can be used to provide lakhs of farmers with timely, localised advice, reducing crop loss and over-use of pesticides by improving the timing of usage.

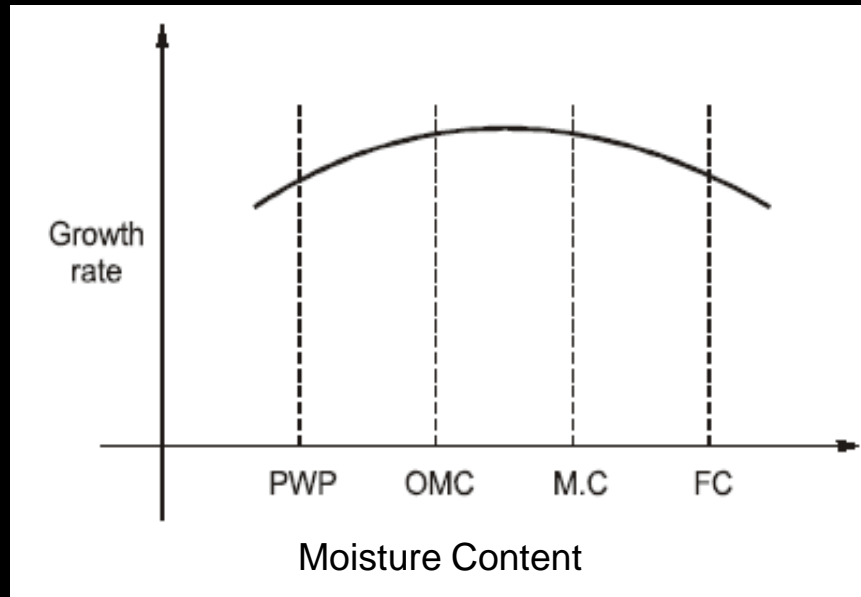

During 2020 cultivation , the solution was deployed in four districts across 3 of cotton-producing states- Gujarat, Maharashtra and Telangana.

The team reached out to nearly 15,000 farmers who saw a benefit through increase in profit as well as a reduction in pesticide cost compared to 2019.

Data Driven Precision Irrigation

**Replace guess / intuition work
with Data-Driven innovation.**

PWP - water content below which plant can't extract water
(Permanent Wilting Point)

OMC - Optimum Moisture / Water content easily extracted by plant

M.C - Moisture content

FC - Max water that can be held by a field

**A sensor-based approach is the most
ideal way to measure soil moisture in
real-time**

Irrrometer Watermark Sensor

**Collect Data from Irrrometer,
analyze it and alert farmers
about watering schedule
through a Mobile App**

Value to farmers

**Optimal irrigation leads to better
quality and a better quantity of crop
yield.**
